My Journey as a Web Developer and Designer at Litecloud

Introduction

Joining Litecloud as an On-the-Job Trainee has been an invaluable experience filled with learning and hands-on opportunities. Over the past one and a half years, I have worked as both a web developer and designer, contributing to various projects that enhanced my skills and added value to the company.

UI Design for Our Application

One of my key achievements was designing the user interface (UI) for our application. My focus was on creating a user-friendly and visually appealing design while collaborating closely with the development team. The goal was to enhance usability and maintain a clean, professional look. The final product was well-received by both users and stakeholders.

Designing Logos and Icons

A significant part of my role involved creating logos and icons that aligned with our brand identity. I ensured that each design was clear, consistent, and representative of the company's values, helping to strengthen the overall brand image.

T-Shirt and Visual Design

I also worked on t-shirt designs for the company, applying principles of typography, color theory, and layout. These designs were well-received by employees and contributed to fostering a sense of unity within the organization.

Expanding My Skills

Beyond design work, I focused on improving my technical skills:

- **Front-End Development:** Early in my training, I learned **Bootstrap** and **jQuery** to enhance UI functionality. I also assisted in updating and organizing previous developers' UI work.
- **Database Management:** After 10 months, I was introduced to **SQL** and **Relational Database Management Systems (RDBMS)**. This allowed me to design data models, write queries, and integrate front-end designs with databases using **C# services**.
- **Full-Stack Development:** I worked on both front-end and back-end development, connecting stored procedures and APIs to improve system functionality.

Major Project: Project Management System

One of the most significant projects I contributed to was a **Project Management System**. This tool allows users to:

- Monitor project costs
- Track delayed tasks
- Generate progress reports

This project further refined my skills in UI design and system integration, giving me hands-on experience in full-stack development.

Current Status

Since my OJT contract ended, I have continued working at Litecloud without a formal contract to complete the **Project Monitoring System**. I am committed to refining my skills and delivering high-quality work while gaining more experience in web development and design.

Conclusion

My journey at Litecloud has been transformative. I have grown as a developer and designer, expanding my knowledge in both **UI** and **full-stack development**. This experience has shaped my career path, and I look forward to tackling new challenges in the tech industry.
